King Kylie Makeup Website:

📌 Project Overview

The **King Kylie Makeup Website** is a front-end UI design project inspired by a modern cosmetic brand. The purpose of this project is to practice and demonstrate skills in HTML, CSS, Bootstrap, and basic JavaScript while focusing on visual design and user interface structure.

Technologies Used

- HTML
- CSS
- Bootstrap
- JavaScript (basic interactivity)

🎨 UI Features

📄 Header Section

- Center-aligned brand logo “King KYLIE”
- Decorative images placed on the right side
- Stylish typography with shadow effects

📢 Marquee Banner

- Animated scrolling text at the top
- Used for branding message display

🎬 Hero Video Section

- Full-width auto plays background video
- Represents brand introduction visually
- Responsive and cover-fitted design

🛍 Best Sellers Section

- Built using Bootstrap grid system
- Product cards include:
    - Product image
    - Name
    - Rating
    - Price

- Hover animation effect for interactivity
- Clean and modern card design

🎥 Trending Videos Section

- Grid-based video layout
- Each video includes a play/pause button
- Interactive JavaScript functionality

📸 Shop Our Instagram Section

- Large featured image display
- Used as a visual promotional section

🖼 Virtual Try-On Section

- Left-aligned image layout
- Centered overlay text
- Stylish typography with soft color theme
- Includes promotional message for product experience

📧 Signup Section

- Email subscription form
- Submit button for user interaction
- Terms and conditions text
- Social media links:
    - Facebook
    - Instagram
    - Twitter
    - TikTok
- Modern glassmorphism design with blur effect

👨‍💻 GitHub Section

- Profile image (circular avatar)
- Developer name and GitHub ID
- Short description
- Clickable GitHub profile link

📱 Responsiveness

- Fully responsive layout using Bootstrap
- Works on mobile, tablet, and desktop devices
- Flexible grid system for product and video sections

⚙ JavaScript Functionality

- Video play/pause toggle feature
- Dynamic class handling for UI interaction
- Smooth user experience for media controls

    ├── Images/
    └── Media/
        ├── Video/
        └── Audio/
```

✸ Conclusion

This project demonstrates a modern and visually appealing front-end website focused on UI/UX design. It showcases the ability to create structured layouts, responsive design, and interactive elements using HTML, CSS, Bootstrap, and JavaScript. The project emphasizes design aesthetics and user experience rather than backend functionality.
